SUMMARY

Lead Software Engineer with 14 years architecting and shipping production systems across web, mobile, and backend. Specializes in distributed systems, microservices architecture, scalable platforms, and high-availability infrastructure. JavaScript-first engineer with hands-on work in TypeScript, Python, PHP, Go, and Rust. Delivered crypto wallets, AI dashboards, RAG systems, chatbots, payment platforms, ERPs, and e-commerce engines used by 350K+ merchants and 5M+ users across e-commerce, fintech, crypto/Web3, AI/LLM, and big data. Track record of leading cross-functional teams, mentoring engineers, owning architecture decisions, and driving code review culture in Agile/Scrum environments. Leverages Claude Code as a daily IDE with multi-agent workflows, MCP tools, and custom subagents to ship 3–5x faster than traditional teams.

SKILLS

Languages: JavaScript, TypeScript, Python, PHP, Go, Rust, SQL, HTML, CSS, Bash

AI / LLM: Claude Code, Anthropic SDK, OpenAI API, MCP (Model Context Protocol), Multi-Agent Systems, Subagents & Tool Use, RAG Pipelines, Vector Databases, Chatbots, Streaming LLM UIs, Prompt Engineering, AI Agents

Frontend: React, Next.js, React Native, TypeScript, Angular, Vue.js, jQuery, Redux, TailwindCSS, D3, Recharts, Responsive Design

Backend: Node.js, NestJS, Express, GraphQL, REST API, SSE, WebSocket, Microservices

Architecture & Practices: System Design, Distributed Systems, Microservices Architecture, Event-Driven Architecture, Scalability, High Availability, Test-Driven Development (TDD), Unit Testing, Code Review, Technical Leadership, Mentoring, Architecture Decisions, Cross-Functional Collaboration, Agile, Scrum, SDLC, OOP

Industries: E-commerce, Fintech, Crypto / Web3, AI / LLM, Big Data, SaaS, ERP, Marketplace

Web3 & Payments: Ethers.js, Web3.js, Multi-chain (EVM, Solana, Bitcoin, BNB, Tron), MetaMask, WalletConnect, Phantom, Stripe API, Payment Gateways, Crypto Checkout, Subscription Billing, WebCrypto API

Infrastructure & Cloud: PostgreSQL, MongoDB, Redis, Firebase, Docker, Kubernetes, AWS, Google Cloud, Vercel, GitHub Actions, CI/CD, Git, Linux

Product & Design: Mobile-first UX, Responsive Design, Design Systems, Figma, Accessibility

WORK EXPERIENCE

Lead Software Engineer, PremAI (premai.io)

Jan 2025 – Present | Remote

- Architected scalable API Dashboard for \$19.5M-funded LLM platform — key management, usage analytics, billing, rate limiting, audit logging.
- Designed quantum-resistant client-side encryption layer for LLM interactions — zero-knowledge architecture, end-to-end with WebCrypto API.
- Shipped Model Playground — token-streaming UI, parameter tuning, side-by-side multi-model comparison.
- Built Fine-tuning UI — dataset upload pipeline, real-time training metrics (loss curves), model evaluation flows.
- Built React Native enterprise app — model management, push notifications, on-device usage monitoring.
- AI-augmented delivery: built dashboard, mobile app, and encryption layer with Claude Code multi-agent workflows — feature parity at a third of the typical team size.

Stack: React, React Native, TypeScript, Next.js, Node.js, TailwindCSS, Recharts, D3.js, WebCrypto API, SSE, Claude Code

Lead Software Engineer, BitGPT (bitgpt.xyz)

Jan 2025 – Present | Remote

- Shipped Terminal — natural-language crypto transactions powered by OpenAI streaming, cross-chain swaps, market analysis.
- Built browser crypto wallet from zero — EVM, Solana, Bitcoin, BNB; real-time balances, transaction signing, network switching.
- Owned checkout & payment surface — h402 protocol integration, merchant onboarding, invoice generation, crypto settlement flows.
- Wallet integrations: MetaMask, Rabby, WalletConnect; error recovery, network prompts, transaction confirmation.
- OpenAI streaming patterns: token-by-token rendering, conversational tx flows, context management for transaction state.

Stack: React, TypeScript, Next.js, Node.js, OpenAI API, WebSocket, Web3.js, Ethers.js, WalletConnect, Claude Code

Lead Software Engineer, Sellix (sellix.io)

Jan 2020 – Jan 2025 | Remote

- Architected and scaled merchant-facing platform serving 350K+ merchants — storefront engine, checkout, dashboards, embed system, React Native app.
- Designed scalable Storefront Engine — visual editor, code-level theme builder, self-hosted templates via API, Style Center, custom-domain auto-SEO.
- Built multi-chain crypto wallet — Phantom, MetaMask, BTC, ETH, BNB, Tron; QR payments, cross-chain deposit detection.
- Integrated 50+ payment gateways — Stripe subscriptions, PayPal, CashApp; unified checkout with dynamic provider rendering.
- Built Embed System — CDN-loaded JS widgets for external merchant sites, data-attribute API, fully white-label.
- Delivered merchant + admin dashboards — real-time analytics, fraud alerts, KYC, dispute resolution.
- Built React Native mobile app — push notifications, order management, payout tracking.
- Architected backend microservices (NestJS, Express) — REST APIs, payment webhooks, crypto transaction verification, analytics aggregation, high-availability under load.
- Drove code review culture and mentored engineers across frontend and mobile teams.
- Adopted Claude Code mid-2024 — cut iteration time on dashboard work from days to hours.

Stack: React, React Native, Next.js, TypeScript, NestJS, Express, Node.js, PostgreSQL, MongoDB, Redis, Web3.js, Ethers.js, Stripe API, Docker, Claude Code

Lead Software Engineer, Startwire (startwire.com) Jan 2017 – Jan 2019 | Remote

- 5M+ users — solo-led platform migration from Angular 1.x to React, zero downtime, no feature regression.
- Built RESTful API layer (Node.js) — decoupled frontend from legacy Ruby backend, enabled independent deploys.
- Full UX ownership (no designer) — redesigned job tracker mobile-first, cut registration from 5 steps to 2.
- Phased migration — Angular and React shipping side-by-side, page-by-page, while delivering new features.

Stack: React, Redux, Angular 1.x, Node.js, Express, Ruby, REST API, Responsive Design

Software Engineer · Tech Lead, Carjojo (carjojo.com) Jan 2017 – Jan 2018 | Remote

- Led migration from Angular to React — performance, maintainability, team velocity gains.
- Built interactive vehicle comparison — side-by-side specs, pricing, dealer maps.
- Managed dev team — owned UI/UX: pricing visualization, filters, mobile dealer flows.

Stack: React, Redux, Angular, Node.js, Python, Django, REST API

Software Engineer, Bizly (bizly.com) 2017 | Remote

- Booking platform UI for \$12M-funded corporate event management.
- GraphQL APIs — real-time venue availability, pricing, booking confirmation.
- Reusable component library — forms, date pickers, venue cards, booking wizards.

Stack: React, Redux, GraphQL, Node.js

Software Engineer, Slooh (slooh.com) 2017 | Remote

- Real-time telescope control UI — camera positioning, exposure control, image capture queues.
- Live image streaming — telescope feeds, celestial overlays, time-lapse tools.
- GraphQL APIs for scheduling, gallery management, community features.

Stack: React, Redux, GraphQL, Node.js, WebSocket, Canvas API

Software Engineer · Founding, Lifograph (lifograph.com) Jan 2015 – Jan 2017 | Remote

- Built entire product from zero — frontend, backend, database architecture.
- Backend with Node.js + GraphQL — profiles API, relationship graph, search engine.
- 2-engineer team; SSR for SEO; mobile-first responsive UI.

Stack: React, Redux, Node.js, GraphQL, MongoDB, Express, SSR

Software Engineer, Yuterra & Colors.life Jan 2014 – Jan 2015 | Remote

- Yuterra — major e-commerce: product catalogs, cart, checkout.
- Colors.life — creator social network: feed, post editor, community.
- Internal CMS — moderation, scheduling, analytics dashboards.

Stack: Angular 1.x, jQuery, Node.js, Responsive Design

Software Engineer, Tinko (tinko.ru) Jan 2013 – Jan 2014 | On-site

- Large-scale ERP — order processing, facility management, employee scheduling.
- Reusable UI component library — forms, data tables, modals, notifications.
- Magento e-commerce (PHP) — product pages, categories, cart, checkout.

Stack: jQuery, JavaScript, HTML, CSS, PHP, Magento, MySQL
